**In this chapter,  
look for the answers to these questions:**

- § What is Gross Domestic Product (GDP)?
- § How is GDP related to a nation's total income and spending?
- § What are the components of GDP?
- § How is GDP corrected for inflation?
- § Does GDP measure society's well-being?

### Micro vs. Macro

§ **Microeconomics:**

§ **Macroeconomics:**

§ We begin our study of macroeconomics with the country's total income and expenditure.

## The Components of GDP

§ Recall: GDP is total spending.

§ Four components:

§ These components add up to GDP (denoted Y):

#### ACTIVE LEARNING 1 GDP and its components

In each of the following cases, determine how much GDP and each of its components is affected (if at all).

- A.** Debbie spends \$200 to buy her husband dinner at the finest restaurant in Boston.
- B.** Sarah spends \$1800 on a new laptop to use in her publishing business. The laptop was built in China.
- C.** Jane spends \$1200 on a computer to use in her editing business. She got last year's model on sale for a great price from a local manufacturer.
- D.** General Motors builds \$500 million worth of cars, but consumers only buy \$470 million worth of them.

**Real versus Nominal GDP**

§ Inflation can distort economic variables like GDP, so we have two versions of GDP:  
 One is corrected for inflation, the other is not.

§ **Nominal GDP**

§ **Real GDP**

2005	\$10	400	\$2.00	1000
2006	\$11	500	\$2.50	1100
2007	\$12	600	\$3.00	1200

Compute nominal GDP in each year: *Increase:*

## The GDP Deflator

§ The GDP deflator is a measure of the overall level of prices.

§ Definition:

§ One way to measure the economy's **inflation rate** is

---

---

---

---

### EXAMPLE:

<i>year</i>	<i>Nominal GDP</i>	<i>Real GDP</i>	<i>GDP Deflator</i>
2005	\$6000	\$6000	
2006	\$8250	\$7200

### ACTIVE LEARNING 2 Computing GDP

	2007 (base yr)		2008		2009	
	<i>P</i>	<i>Q</i>	<i>P</i>	<i>Q</i>	<i>P</i>	<i>Q</i>
Good A	\$30	900	\$31	1,000	\$36	1050
Good B	\$100	192	\$102	200	\$100	205

Use the above data to solve these problems:

- A. Compute nominal GDP in 2007.
- B. Compute real GDP in 2008.
- C. Compute the GDP deflator in 2009.

**GDP and Economic Well-Being**

§

§ But GDP is not a perfect measure of well-being.

§ Robert Kennedy issued a very eloquent yet harsh criticism of GDP:

MEASURING A NATION'S INCOME

34

---

---

---

---

---

---

---

---

**Gross Domestic Product...**

“... does not allow for the health of our children, the quality of their education, or the joy of their play. It does not include the beauty of our poetry or the strength of our marriages, the intelligence of our public debate or the integrity of our public officials. It measures neither our courage, nor our wisdom, nor our devotion to our country. It measures everything, in short, except that which makes life worthwhile, and it can tell us everything about America except why we are proud that we are Americans.”

- *Senator Robert Kennedy, 1968*

## GDP Does Not Value:

36

---

---

---

---

---

---

---

---

## Then Why Do We Care About GDP?

§ Having a large GDP enables a country to afford better schools, a cleaner environment, health care, etc.

§ Many indicators of the quality of life are positively correlated with GDP. For example...
